

METAL EMOSSING A NOTEBOOK

29th March 2023 - Kilmington

EVENT OVERVIEW

Metal embossing is created using simple hand tools as if they were a pencil, pressing a design into a thin sheet of metal which can range from pewter and brass to copper and aluminum.

Different surface treatments can add to the depth, texture and or colour of the design.

Once the metal is embossed you can frame your work of art or apply it to a wide variety of surfaces.

It's an incredibly relaxing craft that doesn't take up too much space so you can easily continue it at home!
